

EXPAND THE BOUNDARIES

Share the benefits

EQUELLA incorporates new technology to enhance the power of Digital Learning Resources. EQUELLA, the next generation of The Learning Edge Learning Content Management System (LCMS), enables you to explore new boundaries, classify new objects and enhance the teaching and learning experience for your institution.

Finding what's 'out-there'

The Digital Repository incorporated in EQUELLA, simplifies the process of discovering Digital Learning Resources (DLR) stored within your institution. You may not know what's 'out-there' but our powerful search options will locate, classify and retrieve your DLR's, easily and effectively.

Contribute and be recognised

When educators contribute Digital Learning Resources to the institution wide repository they are classified and stored for future use. The EQUELLA Copyright and Digital Rights Management functionality guarantees the owner is recognised for their contribution and encourages others to do the same.

Navigate the process

The EQUELLA Activity Assembler offers flexible content authoring. Educators undertake the process of designing, sequencing and assembling Digital Learning Resources more easily, with the EQUELLA Activity Assembler.

*Educators are constantly expanding the boundaries of knowledge as they search the domain for new Digital Learning Resources (DLR). By discovering and classifying new resources and grouping these resources into learning subject matter they open up new learning possibilities. In grouping the Digital Learning Resources into a specific learning context, educators are challenging some traditional boundaries. As they ensure the newly classified DLR's are available for all students they broaden the education horizon and share the benefits. Such experiences are made possible with EQUELLA, which like its namesake **CONSTELLATION EQUULEUS**, is allowing the boundaries of knowledge acquisition to be broadened.*

Classify Once – Reuse Many Times

EQUELLA enhances the power of Digital Learning Resources

Recognising the intrinsic value of Digital Learning Resources is only one part of the discovery process – the real value comes in sharing and reusing what has been created or discovered. EQUELLA manages Digital Learning Resources in such a way that everyone from the mystified onlooker to the system administrator is able to access the power of Digital Learning Resources.

Who Shares – Wins

The Author, The Faculty Staff, The Administrator... The Student

The power of these resources comes from their strong contextual properties. They were designed for a particular learning environment. EQUELLA empowers the educator to discover, classify, compare and document these subject specific Learning Resources. Across campus, across the state or across the country – EQUELLA solves the complex problem of sharing subject specific Digital Learning Resources.

EQUELLA Version 3.0, the next generation of The Learning Edge LCMS, is the culmination of 12 months of development that unifies existing functionality in the product as well as introducing new administrative features especially designed for large scale product roll-outs. With a strong foundation in place, this underlying engine will be leveraged by upcoming feature-centric releases.

Digital Repository

- Contribute Digital Learning Resources into the system via customised contribution wizards
- Enable collaboration – notify other users of available resources within the system
- Rate and comment on contributed resources
- Utilise multiple search options to discover relevant learning resources
- Copyright and Digital Rights Management – ensure your resources are protected

Activity Assembler – content authoring tool

- Design, sequence, assemble and author learning activities
- Disaggregate and customise learning objects
- Flexible delivery methods available to ensure students have access to the right resources at the right time
- Ease of use – integrated WYSIWIG and drag and drop functionality

Institution Manager

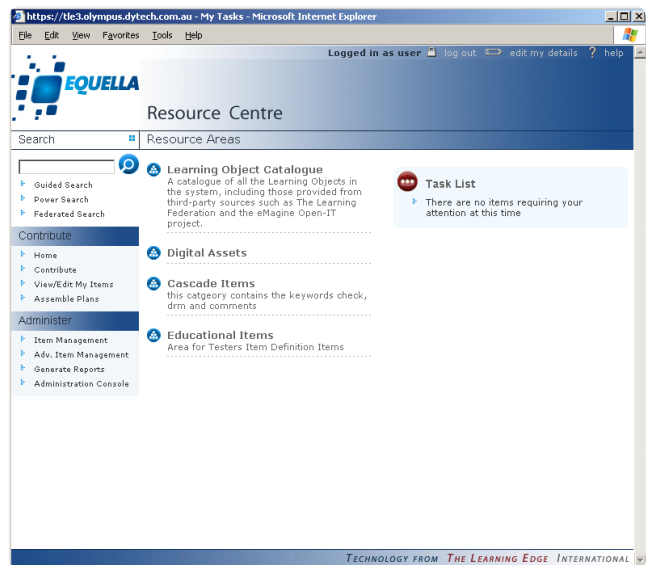

- One physical installation of EQUELLA can host numerous virtual installations

Integration to popular Learning Management Systems (LMS)

- EQUELLA provides seamless integration to systems such as the Blackboard Learning System, which provides the ability for educators to manage and distribute content to their learning environment

Standards compliant

- EQUELLA complies to all major standards. It has been designed to IMS specifications and is SCORM compliant.

Administration Console

The Administration Console provides a range of functions that simplify the management and configuration of EQUELLA. Functionality includes:

- Security Manager – allows editing of permissions for all facets of the application in a unified manner
- Flexible system customisation – customise the appearance of the application
- Reporting – generate system reports
- Collection Definitions – define the collections that Digital Learning Resources are stored within
- Workflow editor – allows content moderation and quality assurance processes to be customised and automated
